

Feature Update December 2022

New Features:

Created an API for our weather information to allow it to integrate with other systems.

Enhancements:

- Added a “City” column to the action log report.
- Added division level identifiers to company level reports.
- Enhanced the speed of report generation for all new reports.
- Enhanced the weather alert flow to require fewer calls.
- Removed the ability for action logs on inspection reports to show action items for a future date in case of edits and additional signatures.
- Expanded the click box for adding action items to the site map to include the icon.
- Increased the amount of time the loading circle for adding attachments would persist in an inspection.

Bug Fixes:

- Fixed an issue that would cause the columns in the .csv export of the action log report to not line up correctly.
- Fixed an issue that would prevent inspectors from deleting controls when editing an inspection.
- Fixed an issue that would prevent the first dashboard map pin you click on from loading.
- Fixed several display issues on iPads.
