

Feature Update November 2022

New Features:

Add our chat widget into the main app of ComplianceGO

Enhancements:

- Added the “Identifier” field from the action item as an option on custom form outputs.
- Various improvements to email bodies and footers
- Revamped the footer to no longer extend across the left navigation bar
- Changed Org Editor to stay on your default role even when assigned as an inspector for the first time. This can be switched at any time.
- Added new floating spinners when a file is uploading in the Photos or Action Item sections or on the Inspection Report
- Widened the button to hide the left navigation by 50%
- Changed the layout of the action item page to put all required fields at the top and all non-required fields on the bottom
- Changed the “Next” button on the add user page to say “Add New User” to better clarify its function
- Added a link to the Site Map on all action items where the action item is connected to a pin on a site map.
- Added three new inspection frequencies: Biweekly on Any Day, Every 3 Months, and Every 6 months.

Bug Fixes:

- Fixed an issue that could cause the site documents page to not load after a document was deleted.
- Fixed issues that caused icons such as the attachment paper clip to not load on inspection reports.
- Fixed an issue that could cause file names not to appear on uploaded documents.
- Fixed an issue that could prevent map duplication.
- Fixed an issue that could cause action item reports for companies to not load.
- Fixed an issue where inspections assigned to an individual would prevent a site from being inactivated.
- Fixed an issue that prevented files other than images to upload to the “Attachments” section of an inspection report.
- Corrected a refresh issue that could cause the “People & Roles” page to not update role assignments immediately.

- Corrected an issue that was causing the inspection calendar to refresh on Apple devices when scrolling.
- Corrected an issue that could cause logos and banners to not display correctly.
- Corrected an issue where having action items on the site map could cause the map history to not load correctly.
- Corrected an issue that would cause the text verification in the self signup to fail.
- Corrected an issue that would prevent controls from being removed when an inspection was edited.
- Corrected issues that prevented site maps with action items on them from exporting.
- Corrected an issue that prevented action items on the site map from being deleted.
- Fixed an issue with fonts that could cause inspections to load slowly.
