

Feature Update September 2022

New Features:

Action Items on Site Maps!

You can now add action items to the site map. Once you have an inspection in progress, it will enable the action item icon on the site maps and you can get started!

Enhancements:

- Removed the confirmation check when placing most icons on the site map. Lines and fill tools still require confirmation checks after you are done drawing.
- Added the ability to move and resize most site map icons after they have been placed. Lines and fill tool areas cannot be moved.
- Added automatic compression for all photos that will provide faster upload speeds for photos while maintaining effective resolutions.

Bug Fixes:

- Numerous small UI fixes to improve performance.
