

Feature Update April 2023

New Features:

1. There is now an option to add required questions to your inspection forms. You can designate questions in your inspection forms that must be answered before the inspection can be signed. This feature is enabled on a question by question basis in the form builder.
2. You can now designate questions in your inspection forms that are ignored by the “Copy and Edit Last Inspection” feature or “Skip Copying”. This feature is enabled on a question by question basis in the form builder.

Bug Fixes:

- Fixed a calendaring issue that could cause an error when unassigning inspections.
- Reintegrated with NOAA after an unexpected NOAA outage due to NOAA’s system maintenance.
- Corrected an issue with the organization inspection history that could cause the wrong columns to display if you went from a child organization to a parent organization.
