

Feature Update September 2023

New Features:

1. Missed inspection, weather events, and in progress reports that were previously site level were added to the organization level.
2. Added notifications for the second and third signature. These notifications will send out as soon as the preceding signature is applied.
3. Added action item verification notifications. These notifications will send out each morning if there are action items that are closed but not verified.

Enhancements:

- Added director support for the hourly precipitation feature.
- Added pagination and .csv for new organization level inspection reports.

Bug Fixes:

- Fixed an issue that could cause company logos and banners to not appear on emails.
- Prevented a path that could cause a user to create a duplicate account.
- Fixed scrolling issues in the UI.
- Corrected an issue that could cause the “View Password” function when setting up a password for the first time to not allow you to proceed unless you typed in the password the second time.
- Fixed issues that could cause your map view to remain attached to a site pin you had previously selected.
- Adjusted the “Select All” option when bulk editing, closing, or verifying action items to stay above the footer.
- Fixed formatting issues on the account activation page on phones.
- Corrected an issue that could cause the daily precipitation report to not include the selected boundary dates in the report.
- Fixed an issue that could cause the inspections calendar for an organization to not display.
- Fixed an issue that could cause an error when clicking “Sign and Don’t Send” when the second signature feature was enabled.
