Feature Update January 2024

January 2024

New Features:
- Added a new link to the site information for sites shared with an MS4 that allows MS4 users to remove shared sites from their MS4.
- Added the option to connect action items on the map with action items added on an inspection report.

Enhancements:
- Added .csv archiving to the hourly precipitation report to allow for easier access to historical data.
- Added additional UI elements for action item certifications when closing action items with different certification statements to make it clearer to users which certification they are agreeing to when they close the action item.
- Revamped the layout of the form builder to make it more user friendly.
- Added a "Settings" tab to the form builder that contains certifications, action item information, and controls information.
- Added a check to send out an activation link if someone tries to reset their password, but they have not activated their account.
- UI improvements around bulk editing/closing/verifying action items to hide unnecessary buttons and text while selecting action items to receive a bulk action or confirming that bulk action.

Bug Fixes:
- Corrected the MS4 search to properly show sites shared with the MS4.
- Fixed an issue that could cause custom forms to not sort alphabetically on the organization management page.
- Fixed an issue with the Google and Microsoft single sign-on buttons on self sign-up that could cause them to not work properly.
- Changed the site list to show numbered sites first.
