

Feature Update November 2023

November 2023

Enhancements:

- Changed the default values for the continuing rain events for the seven day forecast to be in line with updated California requirements.
- Added a new form type “Safety”.
- Changed the .csv export on the daily precipitation totals report to show “0” instead of a blank for any day without precipitation. Only days without readings will show up as blanks moving forward.
- Changed disclaimers to links to be more visible and also take up less screen space.

Bug Fixes:

- Corrected an issue that could prevent users from adding permits to a site.
- Fixed formatting issues with the seven day forecast on desktop and mobile.
- Corrected an issue that could cause the Site Editor dashboard to show “Organizations” instead of “Site List”.
- Fixed an issue that could cause a form to not save properly if a form component had not been added.
- Fixed an issue that could cause the seven day forecast to not display if multiple weather triggers of the forecast type were added to a site.
